

The CERN Accelerator School and Faculty of Science,
Pavol Jozef Šafárik University in Košice are organizing a course on

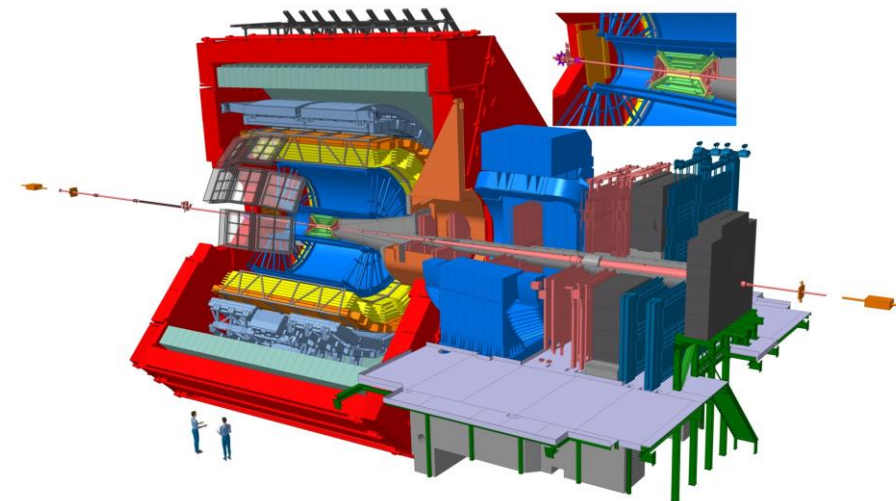

Marek Bombara

Local CAS organizer from Faculty of Science,
Pavol Jozef Šafárik University in Košice

Working on the ALICE experiment at LHC (P2):
Strangeness and Trigger

This Introductory CAS Course represents the core teaching of all CAS courses and also represents the ideal opportunity introduced into the field of particle accelerators. This course will be of interest to staff and students from laboratories and universities, as well as companies manufacturing accelerator equipment. The course will focus on various aspects of beam dynamics and will provide an introduction to the underlying accelerator systems. Key topics will be consolidated through a series of discussion sessions and tutorials, while topical seminars will complete the program.
