This course will mainly be of interest to staff in accelerator laboratories, university departments or companies involved in producing RF equipment for accelerators. The course will include a review of the RF technology presently used in the field of particle accelerators as well as a recapitulation of the theoretical fundamentals.

Different RF equipment and RF technologies will be discussed along with their practical applications for various types of accelerators. Dedicated «hands-on» afternoon courses and seminars will complete the programme.

Due to the afternoon courses the maximum number of participants will be limited. The principle of «first come first served» will be applied.
